

HTR-5

HOME THEATRE REMOTE CONTROL

- Controls up to 12 Devices
- Preprogrammed with all NAD remote commands
- Includes a library of commands for most other brands of Audio, Video, and Home Automation components
- Learning function - learns up to 780 functions from your original remote controls
- LCD Screen - each of the twelve devices has four "pages" of LCD screens
- Macro Operations for enhanced customization
- M1, M2, M3 Buttons send out up to 28 commands each
- 12 Device Buttons send out up to 14 commands each
- 60 Favorite Channel Buttons send out up to 14 commands each
- Punch Through Operations permit easy access to commonly used functions without reselecting the device
- Back Lit for easy operation in low light conditions
- Memory back-up system prevents memory loss when changing batteries
- PC Interface allows easy programming and cloning using a Personal Computer
- Customized Operations and LCD Screens are easily programmed

The NAD HTR-5 is an extremely versatile remote control that is designed to replace the numerous individual remote controls that are normally required to operate all of your equipment. It is capable of controlling up to 12 devices and has an LCD screen that allows four pages of information for each of the devices (see below). Just imagine controlling your components with one remote control instead of having to jump from one remote to the next - that's if you can find them in the first place!

While it has been designed with NAD products in mind, it is truly universal and contains many of the operation codes for other brands. If one of your components' code isn't included in the library, the HTR-5 can learn it. The HTR-5 can learn up to 780 functions from all of your original remote controls, so there is little chance of running out of memory.

In fact, the HTR-5 can be totally customized and programmed in any way you wish. Buttons may be easily renamed, for example, Device 1 renamed to DVD and so on. Macro functions allow the more advanced user to complete even more enhanced changes. There is a personal computer interface that allows you to programme and even clone the unit. In addition, further design software is available by connecting to the NAD web site at www.NADelectronics.com.

If you are not technical, no need to worry. The NAD HTR-5 is easy to operate. The 60 Favourite buttons means that you will easily access the commands that you require. This smart remote can be used in both bright and low light conditions, making it ideal in Home Theatre applications.

The NAD HTR-5 has a memory back-up system to protect your settings when batteries run low or are being changed.

All in all, the NAD HTR-5 offers a very intelligent solution to combining all your remote control units into one easy to operate remote control.
